

Quelques codes d'erreur d'exécution (Runtime Error) dans Free PASCAL

1	: invalid function number	205	: floating point overflow
2	: file not found	206	: floating point underflow
3	: path not found	207	: invalid floating point operation
4	: too many open files		
5	: file access denied	208	: overlay manager not installed
6	: invalid file handle		
12	: invalid file access code	209	: overlay file read error
15	: invalid drive number	210	: object not initialized
16	: cannot remove current directory	211	: call to abstract method
17	: cannot rename across	212	: stream registration error
18	: no more files	213	: collection index out of range
100	: disk read error	214	: collection overflow error
101	: disk write error	215	: overflow checking when doing computation with integer
102	: file not assigned		
103	: file not open		
104	: file not open for input	216	: general protection fault
105	: file not open for output	217	: invalid operation code
106	: invalid numeric format	227	: assertion failed
150	: disk is write protected	300	: file IO error
151	: bad drive request structure length	301	: non-matched array bounds
152	: drive not ready	302	: non-local procedure pointer
154	: CRC error in data		
156	: disk seek error	303	: procedure pointer out of scope
157	: unknown media type		
158	: sector not found	304	: function not implemented
159	: printer out of paper	305	: breakpoint error
160	: device write fault	306	: break by ctrl/c
161	: device read fault	307	: break by ctrl/break
162	: hardware failure	308	: break by other process
200	: div by zero	309	: no floating point coprocessor
201	: range error		
202	: overflow stack	310	: invalid variant type operation
203	: heap overflow		
204	: invalid pointer operation
